ALTERNATIVE PLASTICS LTD

BLACK, WHITE & OPAL SHEET SWATCH

Here you can see our black, white and opal sheet together in normal lighting.

The sheets are seen from top to bottom in the following order: Opal, White, Black.

Cast Opal sheet:

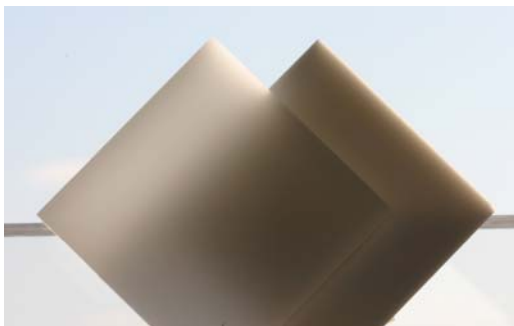

- Slightly translucent off white colour
- Glossy finish
- Allows some light transmission through – suitable for light boxes etc.
- The cut edges of this material can be polished up to a shine

Cast White sheet:

- Completely solid colour & brilliant white
- Glossy finish
- Appears to not allow any light transmission through it; however the smallest amount of light will get through but is hardly noticeable.
- The cut edges of this material can be polished up to a shine

Cast Black sheet:

- Completely solid colour
- Glossy finish
- Does not allow any light transmission through it
- The cut edges of this material can be polished up to a shine.

Here you can see Opal & White sheet samples held up to the light on a sunny day.
(Order: Opal front, White back)

The opal sheet allows some light through, the white hardly any.

Please note that the thickness of the Opal material will not change the amount of light transmission.
(Thinner material does not allow more light through.)
